

# Pain Away Cream is a powerful blend of natural ingredients for targeted pain relief.

Key active ingredient **Glucosamine** (see box below) is combined with **Methyl-sulfonyl-methane (MSM)**, which is an exceptional transdermal sulphur compound. MSM supplies affected areas with a bio-available form of sulfur. Our bodies use sulfur to aid in tissue pliability, encourage the repair of damaged skin, and assist in the synthesis of collagen and maintenance of healthy joints. MSM is a natural and effective solution for many types of pain and inflammatory conditions.

**MSM**

**Menthol**

**Menthol and Camphor** are used for their cooling effects.

These two ingredients also work together to stimulate circulation, detoxify skin tissue, and reduce sensitivity. Menthol has analgesic properties thereby reducing the sensation of pain. Camphor Oil has also been shown to help ease inflammation by acting as a counterirritant and numbing the peripheral sensory nerves. It is easily absorbed when applied topically, making it a particularly effective treatment for arthritic joint pain. Menthol and Camphor together have been shown in studies to treat pain in muscles and joints due to arthritis, backache, strains, or sprains.

**Camphor**

**Turmeric**

**Turmeric** has become a very popular in North America over the past few years, and has been used in India for centuries as a spice and medicinal herb.

Pain Away Cream combines Turmeric in a botanical blend with **Frankincense** and

**Frankincense**

**Devil's Claw**. This blend of

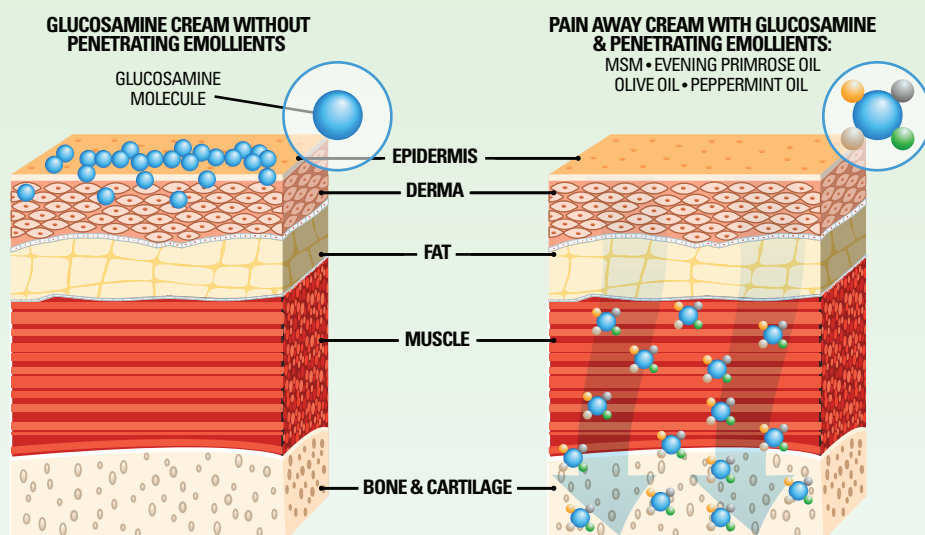

**Devil's Claw**

three medicinal herbs is added to the formula because each of them are well known to relieve arthritis inflammation.

The combination of all seven active ingredients with the penetrating emollients results in an easily absorbed topical cream for targeted pain relief. It has a mild and pleasant mint odour, and does not run or cause a mess when applied.

**Pain Away Cream is paraben free and approved by Health Canada** to temporarily relieve pain due to osteoarthritis.

## How Pain Away Cream Works

**Glucosamine**

**Glucosamine has been clinically proven to relieve pain and joint stiffness associated with osteoarthritis.** Glucosamine does however degrade when digested, and is partially absorbed by the liver and other tissue, leaving less available for the joints.

On its own, **Glucosamine cannot absorb through the skin, but Pain Away Cream combines Glucosamine with transdermal MSM as well as the penetrating emollients Evening Primrose Oil, Olive Oil and Peppermint Oil.** They help Glucosamine and the six other active ingredients in Pain Away Cream to penetrate deep through the skin, while stimulating circulation, opening pores, soothing, and moisturizing.

**Non-medicinal ingredients:** Water, Glycerol Stearate & PEG 100, Cetyl Alcohol, Olive Oil, Stearyl Alcohol, Glycerin, Beeswax, Peppermint Oil, Phenoxyethanol & Ethylhexylglycerin, Triethanolamine, Carbomer, Evening Primrose Oil.
